

INSIGHT

## Leveraging technology to streamline operations

### **SUMMARY**

Learn about how you can leverage developing technologies, such as machine learning, mobile devices and Geographic Information Systems (GIS), to streamline your operations. We will discuss how these technologies can work together to revolutionize the way your company can extract, collect, store, manage and help make informed decisions with critical information about your assets.

### **KEY TOPICS**

- Using machine learning to extract data
- Mobile technology - collaboration between field and office
- Insights and advanced analytics

### **ABOUT THE PRESENTER**

**Scott Komarek, PE**  
**Sr. Engineering Specialist**

Scott serves as senior engineering specialist at Bartlett & West. He obtained a civil engineering degree from the University of Kansas and is licensed as a professional engineer in multiple states. Scott has more than 12 years' experience executing midstream infrastructure, asset management and technology projects. He has worked on a variety of diverse projects implementing 3D BIM modeling, GIS, LiDAR and other emerging technologies.
