

INSIGHT

From Analysis to Action: An Overview of Noise Impact and Mitigation

SUMMARY

This presentation explores the requirements, considerations and best practices for conducting a roadway traffic noise analysis and the data required to complete the analysis.

KEY TOPICS

- Background requirements
- Receiver selection
- Noise validation
- Noise modeling
- Mitigation
- Public Involvement

ABOUT THE SPEAKERS

Robert Pitt is a National Environmental Policy Act (NEPA) professional with decades of experience conducting and managing NEPA projects and documents. Robert's environmental analysis and public involvement experience includes preparation of categorical exclusions (CE), environmental assessments (EA) and environmental impact statements (EIS); air quality and noise impact analyses; noise mitigation designs; wetland and jurisdictional waters delineations and mitigations; hazardous materials investigation; economic and social impact analyses; and facilitation of focus group meetings and public meetings and hearings.

DURATION: 42 minutes
